Development/ build process

My past:

After finishing my Masters in Microbiology, I worked in a Pharmaceutical and Drug Discovery company for 4 years. I was an Associate Research Scientist who worked on mutagenicity and ecotoxicology studies.
I migrated to Australia in 2015 and did my Cert 3 in Early Childhood Education and Care. I worked as an educator in an amazing centre for 1 year.

What I am doing now:

I am pursuing a Diploma In IT at Coder Academy with big ambitions of getting into the industry and excelling at being a developer along with expanding my knowledge.

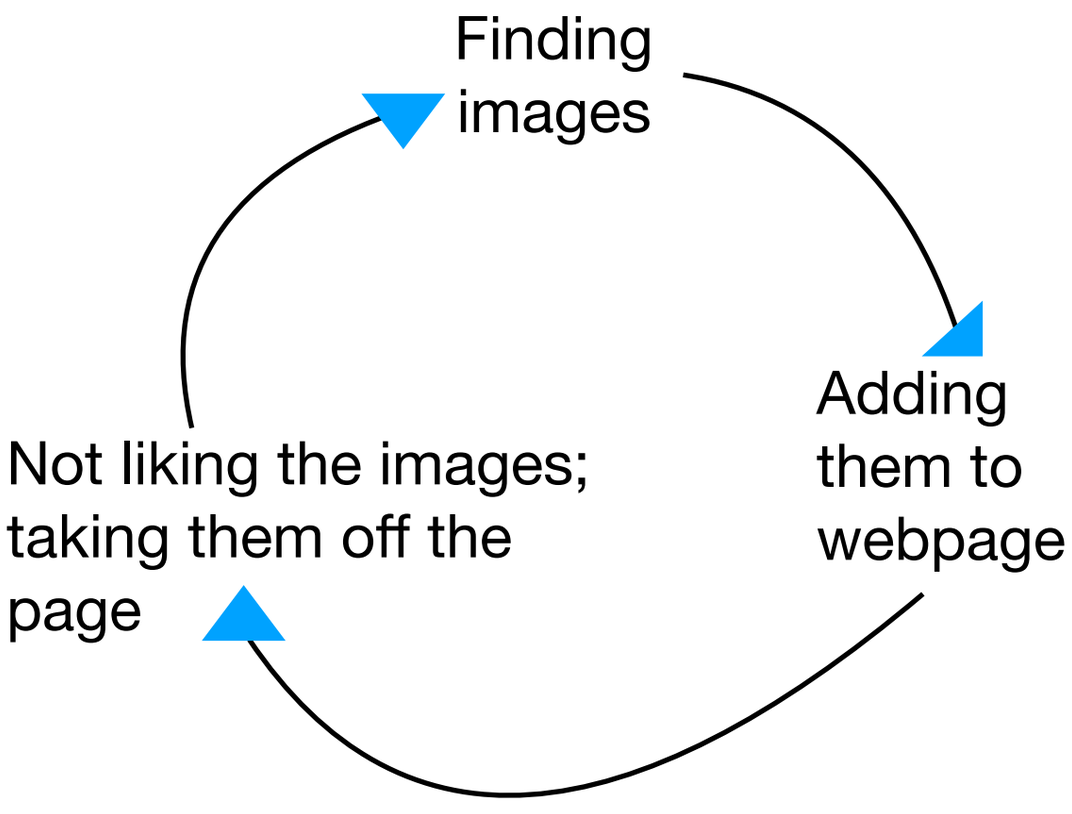
Features/Components

- Navigation bar with nav buttons
- Links to GitHub and LinkedIn
- Contact form with Submit button
- Blog page
- Hover animation

Favourite parts

- Visualising how all the pages would look
- Playing around with the HTML/CSS to try different combinations and styling. Many concepts understood during this process.



Challenges

- Putting together all the concepts learnt, was harder than I thought.
- Had to keep changing flex property/value pair to get them where I really wanted
